

PUMP SERVICE

SPECIFIC FOR PLANUS PRODUCTS

Long life and efficiency guaranteed with “**Pump Service**”.

Planus has developed “**Pump Service**”, a product specifically designed for the descaling and maintenance of toilets and gray water tanks.

Some tests carried out on our products with commercial descalers have shown that the highly aggressive acidic substances contained in them cause damage to the components of the appliances and therefore their use is strongly discouraged.

The composition of “**Pump Service**” was developed specifically for Planus components ensuring effective cleaning, lubrication, performance and durability without risk of damage.

We recommend using a 1 liter bottle every two months for each appliance.

Instructions:

1. Unplug appliance from electrical socket;
2. Pour entire bottle content in the toilet or in one of the connected users (washbasin, shower, bidet);
3. Use the same bottle to pour 1 lt of water in the toilet or in one of the connected users;
4. Let it act for about 2 hours;
5. Plug the appliance to electrical socket;
6. Flush the toilet or open tap in one of the connected users for about 20 seconds.
